

Prevention from Ingestion of Batteries

Top Tips

1. Keep coin lithium battery-controlled devices out of sight and reach of children. These include remote controls, singing greeting cards, digital scales, watches, hearing aids, thermometers, children's toys, calculators, cameras, key fobs, t-light candles, flashing holiday jewelry or decorations all contain button batteries.
2. Keep loose batteries locked away or place a piece of duct tape over the battery compartments controller to prevent small children from accessing the battery.
3. If you suspect your child has ingested a battery, go to the hospital immediately. Do not induce vomiting or have your child eat or drink anything until assessed by a medical professional.
